

LacriCATH[®]

Developed by Bruce B. Becker, M.D.

Lacrimal Duct Balloon Catheters
The less invasive treatment for chronic tearing.

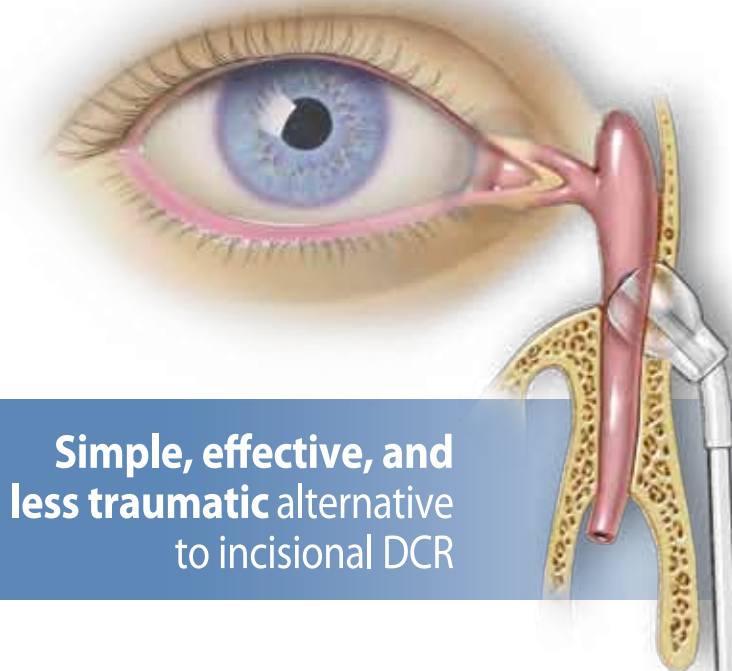

Provide Your Patients With The Best Treatment Options

Setting the standard
for less invasive
treatment

Dacryoplasty (DCP)

- Achieves dilation of the lacrimal duct in up to 95% of pediatric patients*
- Provides adult patients an alternative to incisional DCR
- Reduces operative time — eliminates placement of tubes
- Less invasive, less traumatic option for your patients

Simple, effective, and
less traumatic alternative
to incisional DCR

Dacryocystorhinostomy (DCR)

- Reduced operating time
- Simple maneuvering through the nose and into the lacrimal sac
- Creation of large, round 9mm osteotomy
- Elimination of external patient scarring
- Minimally invasive approach to DCR
