

Better distribution is synonymous with better Myocardial Protection

The Quest MPS2[®] Myocardial Protection System's unique Auto-Regulated Pressure Control feature responds automatically to dynamic changes in coronary vascular resistance, which occur during the onset of arrest and fluctuate during cross-clamp.

Quest MPS2[®] Capabilities: Targeted drug delivery without dilution, auto-regulated pressure control, precision flow rate control, full-range temperature control, plus many safety features. Call us or email today for an evaluation.
