## The QLINCH™ Securement Band

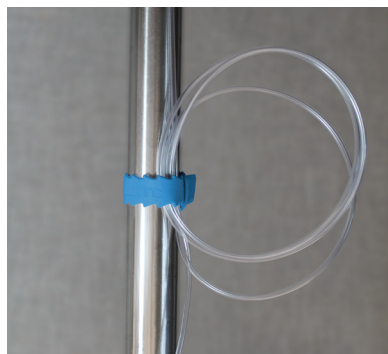

The QLINCH Securement Band provides a better solution for securing and organizing equipment in many hospital environments.

### Primary Uses:

- Organizes tubing sets to help reduce mix-ups and line confusion
- The soft, pliable design will not occlude IV lines
- Secures tubing to prevent trip hazards and improve patient mobility
- Assists with contamination prevention by keeping lines off the floor
- Eliminates the need for tape
- Can be used in multiple applications to fit a variety of needs around all areas of the hospital
- Secures critical components of IV sets and other cords
- Secures MultiPort® Manifolds and ExoFlex™ Manifolds to IV poles

### Potential Uses:

- Group tubing bundles
- Segregate or isolate specific lines from other lines
- Secure tubing to poles or bed frame to prevent accidental catheter pull out
- Tie back tubing to control length of sets and secure tubing to provide added mobility for patients
- Tie back cords and hoses when storing or moving equipment
- Managing oxygen lines
- Organize storage rooms/closets by keeping equipment neat and tidy
- Organize nursing stations and equipment

QLINCH Bands are made of a soft, non-slip material to hug the metal pole, and it can quickly be removed without the sticky residue left behind by tape.

**Get more organized with QLINCH Bands.**
